Project Overview

ProAffluence consolidates Mutual Funds, PMS and Stocks into one monthly client PDF for approximately 205–250 group heads. The current workflow depends on a custom MS Access process and Excel. The Access system is struggling with data volume, and key logic depends on a former employee.

The proposed internal web portal replaces that workflow with structured entry for Master Cashflows, manual Closing Balances, calculations aligned with O_Template.xlsb, and month-end password-protected FY Annual Dashboard PDFs. Staff can preview and approve reports before they are emailed.

Primary Outcomes

- Move operations from MS Access to a maintainable web portal and database.
- Provide structured cashflow entry and broker Excel upload for MF, PMS, stocks and related categories.
- Allow staff to enter monthly closing balances manually; the system will not invent closing values.
- Reuse the existing Excel template formulas and layout for report calculations and presentation.
- Require staff preview and approval before any client report email is sent.

Template Assessment

O_Template.xlsb contains 12 sheets. Master Cashflows and Closing Balances are the operational input sheets; the remaining sheets support calculation and presentation.

Core Input Sheets

- Master Cashflows: transaction log for client activity, populated through portal forms and Excel upload.
- Closing Balances: monthly asset values entered manually by operations staff.

Existing Template Components to Reuse

- FY Annual Dashboard layout and formulas.
- AddtnlInfo period helpers and DashData-driven SUMMARY, XIRR and allocation blocks.
- Existing point-to-point (AR_Val) versus XIRR (XIRR_Val) display switch.
- IndicesData and Category Breakup structures where automation rules are clear.
- CY, Quarterly and Monthly sheets remain available for internal use and are not automatically emailed.

Platform Components

- Web interface, authentication, audit trail and database for approximately 205–250 group heads.
- Backend services to validate entries, derive intermediate rows and run month-end jobs.
- Excel engine to populate the template, recalculate existing formulas and export PDFs.
- Benchmark refresh, PDF password protection, email preview/approval and sending workflow.

Proposed Solution

Internal Web Portal

An internal portal for the ProAffluence team, with screens for group-head records, Master Cashflows, Closing Balances, month-end processing, email preview/approval and send history. The interface will use clear forms, readable tables and draft, ready, approved and sent statuses.

User Access and Logins

- Super Admin: two user accounts with administrative access.
- Staff Entry: staff login(s) for entering and uploading trade/cashflow data and closing balances.
- Role-based permissions will control access to entry, approval and administration functions.

Database

The database will store group-head profiles, including PAN where required, categories, cashflow transactions, manual closing balances, report metadata, email events and audit logs. The portal database will be the system of record; Excel will remain the calculation and PDF layout engine.

Hybrid Calculation

The backend will prepare and validate input data. Excel will recalculate the existing O_Template dashboard formulas. One anonymised filled client file will be used for calculation parity testing where available.

Month-End Workflow

Complete cashflows and closing balances → refresh benchmarks → run calculations → export password-protected FY Annual Dashboard PDFs → staff preview → manager approval → send → log the result.

Scope of Work

1. Group-Head Masters

- Create and edit group heads, family-member mapping where needed, contact email and active/inactive status.
- Maintain PAN and other operational identifiers, with fields confirmed during discovery.
- Maintain category and sub-category masters aligned with the template, including PMS, MF, stocks, equity, debt and other applicable categories.
- Provide basic search and filters for operations.

2. Master Cashflows and Trade Entry

- Structured entry form for date, transaction type, category, sub-category, amount, group head and related fields matching Master Cashflows.
- Support PMS, MF, stocks, equity, debt and other categories used by ProAffluence.
- Broker Excel upload for bulk rows, with mapped columns and validation errors shown before import.
- Allow correction or voiding of entries with an audit trail recording who changed what and when.

3. Closing Balances

- Enter closing amounts by group head, category and sub-category for the selected month.
- Provide a bulk-friendly grid or form for approximately 205+ entries per cycle.
- Option to block month-end processing when required closing entries are missing.
- Closing values remain manually entered; the system will not estimate or scrape market values.

4. Manager Approval for Trade and Closing Entries

- All trade entries and closing balance entries must be approved by a manager before they are treated as approved records for month-end reporting.
- Entries will have clear pending, approved and rejected/returned statuses.
- Managers will be able to review submitted entries and approve or return them for correction.
- Record the submitting user, approving manager, timestamps and relevant changes in the audit trail.

5. Hybrid Calculation and Template Fill

- Backend validation and preparation of intermediate rows, category breakup rules, period tags and cashflow signs for returns.
- Write Master Cashflows, Closing Balances and derived staging data into O_Template, then recalculate existing dashboard formulas.
- Use XIRR for periods of 12 months or more and point-to-point (absolute) return for periods under 12 months.
- Automate equity/debt allocation; treat Hybrid products as 50% Equity and 50% Debt unless ProAffluence provides an override.
- Validate missing emails, missing closing balances and obvious data gaps before the reporting run is frozen.

6. Benchmark Automation

- Use Nifty 50 TRI where a free source provides TRI; otherwise use the closest available free Nifty 50 series with clear labelling.
- Include BSE 500 and Sensex where free data feeds permit.
- Align weighted index comparisons to actual client cashflow dates.
- Provide a manual fallback into IndicesData if a free source is unavailable.

7. FY Annual Dashboard PDF

- Include Group Head, Family Member, Category, Inception, From Period and To Period; To Period will be the selected month-end.
- Include summary by financial year, value as on 31 March, new investments, XIRR/point-to-point return, Nifty 50 TRI and net investment.
- Include returns by category and asset-allocation movement for debt/equity and portfolio versus benchmark.
- Generate a batch of password-protected PDFs for all active group heads.

8. Email Design, Approval and Sending

- Create one branded HTML email template with header, short body, attachment notice and footer.
- Allow staff to preview the subject, merged body fields and exact PDF attachment for each client.
- Require manager/staff approval in the portal before any client email is sent.
- Use an SMTP or transactional email provider configured for ProAffluence.
- Provide email-domain warming assistance, including SPF, DKIM and DMARC guidance and a gradual sending ramp.
- Maintain send logs for queued, sent, failed and bounced emails where the provider exposes these statuses.

9. QA and Handover

- Configure maker/checker permissions for entry, approval and sending.
- Conduct user acceptance testing on sample group heads and one complete month-end dry run.
- Deploy to approved hosting and provide an admin guide and knowledge transfer.
- Include a 30-day post-go-live defect-support period for the delivered build.

Calculation Architecture

Layer	Responsibility	Examples
Web portal and database	System of record, user interface, validation and jobs	Logins, masters, cashflow forms, Excel upload parsing, closing grid and approval queue
Backend services	Business preparation before Excel	Period tagging, cashflow signs, Hybrid 50/50 split, weighted index cashflow dates, missing-data checks and batch processing
Excel / O_Template engine	Existing dashboard formulas and PDF layout	FY Annual Dashboard formulas, XIRR_Val / AR_Val display rules, charts and print areas
External feeds	Index levels from free sources	Nifty / BSE 500 / Sensex data in IndicesData, with manual fallback

Why Use Both Backend and Excel?

- Reusing the Excel formulas helps keep client reports aligned with the existing sample.
- The backend prepares Master Cashflows, Closing Balances and derived staging data.
- Closing balances remain manual; the backend stores them and writes them into the template.
- If an Excel formula cannot run in the selected environment, an equivalent backend calculation will be implemented and parity-tested as an exception.

Returns and Benchmarks

Portfolio Returns

- XIRR for periods of 12 months or more.
- Point-to-point (absolute) return for periods under 12 months, avoiding misleading annualisation.
- Apply the same rule consistently with the O_Template XIRR_Val and AR_Val logic.

Asset Allocation

- Automate equity/debt classification for products included in the report.
- Treat Hybrid products as 50% Equity and 50% Debt unless ProAffluence supplies a product-level override.

Benchmarks

- Automate Nifty 50 TRI or the closest free Nifty series, and BSE 500 / Sensex when free sources allow.
- Use weighted index comparisons based on the client's cashflow dates.
- Provide a manual fallback if a free feed is unavailable.

Month-End Delivery

Step	Activity	Responsible role / output
1	Enter or upload cashflows and trade entries	Staff entry; submit for manager approval
2	Review and approve trade entries	Manager; approved Master Cashflows
3	Enter closing balances	Staff entry; submit for manager approval
4	Review and approve closing balances	Manager; approved closing values
5	Refresh benchmarks	System, with staff fallback if needed
6	Run hybrid calculation	System; report data prepared
7	Generate PDFs and preview emails	System and staff; password-protected PDF and preview
8	Approve and send emails	Authorised approver; email and send log
9	Review failures	Operations staff; retry list from send log

Clients receive the FY Annual Dashboard each month with the To Period set to the relevant month-end. The same process closes the financial year on 31 March.

Security

The portal handles client portfolio data and outbound reports. Hosting account ownership remains with ProAffluence.

Access and Identity

- Internal staff accounts only; no client login portal.
- Unique user accounts; no shared generic passwords.
- Role-based access for Super Admin, staff entry and manager approval.
- Idle session timeout and logout from all sessions after a password change.
- Optional IP allowlist if ProAffluence provides office or VPN ranges.

Data Protection

- HTTPS/TLS for all portal traffic.
- Database-volume encryption at rest or equivalent host-managed protection.
- Store SMTP credentials and API keys in environment variables or a secrets store, not source code.
- Treat PAN and contact information as sensitive data and mask fields in lists where practical.
- Use least-privilege database and service accounts.

Audit and Operations

- Audit create, update and void actions for cashflows, closings, masters and approvals.

- Maintain a send log with approver, sender, timestamp, recipient, report period and outcome.
- Use soft delete or void actions rather than silently deleting financial records.
- Configure daily automated database backups for an agreed retention window and test a restore before go-live.

Report and Email Controls

- Password-protect PDF attachments using a password rule agreed during discovery.
- Do not send client reports without explicit approval in the portal.
- Allow preview of the exact attachment before approval.
- Configure email-domain authentication (SPF, DKIM and DMARC) as part of sending setup.

Application Hardening

- Server-side validation for inputs and parameterised database queries.
- Protection against common web vulnerabilities, including injection, basic XSS and CSRF on state-changing actions.
- Address known critical dependency vulnerabilities during development and the defect-support period.
- Keep production secrets out of source control and separate staging and production configuration.

Technology Approach

Layer	Approach
Web UI	Responsive internal portal with forms, grids and status indicators
API / services	Backend for masters, cashflows, closings, month-end jobs and email queue
Database	Relational database as the system of record
Calculations	Backend preparation plus O_Template Excel recalculation
PDF	FY Annual Dashboard export with password protection
Email	SMTP / transactional provider with sending-domain setup
Benchmarks	Free public/API sources with manual fallback
Hosting	ProAffluence-approved cloud or VPS

Exact frameworks will be confirmed during discovery. The priority is month-end reliability and parity with O_Template and the sample PDF.

Deliverables

- Internal portal for group-head masters, Master Cashflows (form and broker Excel upload) and manual Closing Balances.
- Super Admin access for two users and staff entry access, with manager approval controls.
- Database schema and deployed application on agreed hosting.
- Hybrid calculation pipeline using backend preparation and the O_Template Excel engine.
- Free-source benchmark refresh, including weighted index comparison by cashflow dates.
- Month-end generation of password-protected FY Annual Dashboard PDFs for active group heads.
- Branded email template, preview/approval workflow and send logs.
- Email-domain setup and warming assistance.
- Security controls described in this document.
- Admin guide and knowledge transfer.
- 30-day post-go-live defect support for the delivered build.

Product Principles

Operations First

Screens are designed for staff entering cashflows and closing balances, with short forms and clear status.

Template Remains the Report Engine

Client PDFs use the FY Annual Dashboard in O_Template to preserve alignment with the sample report.

Closing Balances Stay Manual

The system stores the values entered by operations staff and does not invent month-end asset values.

Approval Before Sending

A client report is sent only after the required staff approval and preview.

Development Process

The main screens will be reviewed before the month-end workflow is finalised. The estimated implementation timeline is 5–7 weeks from kick-off, followed by the 30-day defect-support period.

Stage	Work	Indicative duration
Discovery	Kick-off, master fields, password rule, sample file and Excel upload column mapping	Week 1
Portal and data	Masters, cashflows, Excel upload, closing grid and roles	Weeks 1–3
Calculation and PDF	Backend preparation, Excel engine, benchmarks and password-protected PDF	Weeks 3–5
Email and security	Email template, preview/approval, sending setup, access and audit	Weeks 4–6
UAT and go-live	Month-end dry run, fixes and handover	Weeks 6–7
Support	Defect fixes in the delivered build	30 days after go-live

Out of Scope

- Kotak Neo or franchisee stock API automation.
- PMS provider APIs, including Wealth Spectrum and OTP/2FA workarounds.
- Futurewise or other mutual fund portal auto-pull.
- Mailbag service to parse mutual fund statements from email.
- Automatic calculation or market scraping of Closing Balances.
- Client login portal for end investors.
- Automated email delivery of CY, Quarterly or Monthly Dashboard packs; the automated client report is FY Annual only.
- Paid market-data subscriptions.
- WhatsApp, SMS or physical courier delivery.
- Native mobile applications.
- Tax, capital-gains or SEBI filing modules.
